PARTNERSHIPS AND NETWORKS SUPPORT LIFELONG LEARNING IN COMPANIES

About the authors

John Holford
Prof Dr John Holford is Robert Peers Professor of Adult Education at the University of Nottingham, and Editor of the International Journal of Lifelong Education. A sociologist and adult educator, he has also worked at the Universities of Surrey and Hong Kong, and with the Workers’ Educational Association. His current research is in European lifelong learning policy and the development of adult education. His recent books include Adult Education Policy and the European Union: Theoretical and Methodological Perspectives (editor, with M. Milana, Sense Publishers 2014), and Lifelong Learning in Europe: National Patterns and Challenges (editor, with E. Saar & O.-B. Ure, Edward Elgar 2013).

Pia Cort
Pia Cort is Associate Professor at the Danish School of Education, Aarhus University. Her research area is vocational education and training, lifelong learning and lifelong guidance policies and the policy-practice nexus. She has contributed to the development of the methodology of ‘policy trailing’ applied within the LLLight-in-Europe project work package 5: ‘Trailing the Unpredictable Pathways of EU Lifelong Learning Policy’ in Milana & Holford (eds.) (2014) Adult education policy and the European Union : theoretical and methodological issues, Sense Publishers.

Anne Larson
Dr Anne Larson is associate professor at the Danish School of Education, Aarhus University. I holds an MSc in Political science and a PhD in Educational sociology. Her main research areas are adult education, lifelong learning and education policy. She is co-convenor for network on Policy Studies and Politics of Education at the European Educational Research Association.

Susana Melo
Dr Susana Melo was awarded her PhD in Political Sociology by University of Bristol in 2013. She is a Research Fellow at the School of Education University of Nottingham U.K. since January 2014, when she joined the LLLight’in’Europe project. Her research interests revolve around the political economy of (particularly higher) education, sociology of knowledge and spatial ethnography.
Ivana Studená

Dr Ivana Studená is a researcher at the Institute for Forecasting of the Slovak Academy of Sciences. Previously, she worked as a senior policy analyst for the OECD LEED Trento Centre for Local Development based in Italy on design of assessment tools for local development. She has also acquired business experience working in private sector on business development in Prague and Bratislava. Ivana holds a Ph.D. in Economics from the University of the State of New York and CERGE-EI in Prague and a M.Sc. in Computer science from Faculty of Electro-engineering at Slovak Technical University.

Pasqua Marina Tota

Pasqua Marina Tota holds a M.A. in Social, Work and Communication Psychology and a M.A. in Lifelong Learning: Policy and Management. She was awarded three academic scholarships from the University of Kent, the University of California, San Diego; at Aarhus University and Deusto University. She joined the Department of Education at Aarhus University in Copenhagen in October 2014 as a Research Assistant. Her main research interests are in the areas of education policy and politics, with a focus on civil society participation in the governance of education.

**Introduction**

How do partnerships and networks develop lifelong learning in companies?

There is much evidence that social networks affect the lifelong learning of individuals. In our research, we have investigated how far this is also true of business enterprises. Companies do not exist in a vacuum. Partnerships and networks are vital in developing and supporting lifelong learning opportunities within companies.

A wide range of organisations and agencies play a part: private companies, government agencies, public educational, training and research bodies, and NGOs – including especially social partners such as trade unions, employers’ associations. Our “policy trail” methodology enabled us to explore their role in supporting and developing lifelong learning for enterprise employees.

---

**Key Observations**

The benefits of education/enterprise relationships are mutual, but there are also risks

Countries differ in how companies’ role in education is organised (or “institutionalised”). In particular, this differs by education level: for example, in Denmark companies participate in course accreditation up to Masters level; Germany has a dual system at all levels. There are also differences in how public finance for training and education is delivered, and in the understanding of the company as an education/trainer.

When a company’s key staff know “how the educational world works”, their enterprise is better-positioned to take advantage of the opportunities available to it and its staff. Well-networked companies, with a good range of collaborations, tend to have better understanding of education and training options.

Good networks enable companies to identify and meet specific learning and training needs more effectively, and to develop employees in accordance with company needs.
Companies’ involvement in NGOs and professional networks facilitates participation in highly valued peer-to-peer learning and knowledge transfer. It also contributes to a better identification of educational and training needs that align with business development needs.

Strong relations between companies and education institutions generate mutually beneficial knowledge exchange dynamics.

Companies can benefit from building relationships with educational institutions. However, there are also risks: in particular, public educational and training organisations should ensure that the public interest is not subordinated to the business interests of particular companies (e.g., in marketing their products). Public regulation has an important role in protecting the public interest. This risk is particularly acute where public bodies are short of funding.

Professional associations play a valuable role as mediators or brokers in relations between governments and companies. (In 13 out of our 14 case studies, companies we investigated were members of one or more professional association.)

Professional associations and trades unions can play a role in defining public training provision priorities, and in the provision of lifelong learning for employees. (We found that their role varies by country and by sector).

Involvement in social networks and NGOs can constitute a form of ‘social partnership’. Though often directed towards lobbying particular group interests in public policy environments, this also encourages lifelong learning opportunities relevant both within companies and for public policy-makers.

Where trades unions are well-established, they provide an important source of pressure to encourage and support lifelong learning. Building lifelong learning into collective agreements can be particularly important.
Professional associations can facilitate knowledge and experience exchange, and awareness of the availability of lifelong learning, amongst companies and managers.

Relations between the companies we investigated and government agencies were mainly those of supplier and/or customer.

For some enterprises, provision of services to government and public agencies is financially important. Some of these companies provide advanced expertise. Commercial engagement such as this benefits lifelong learning both within government and in the private sector.

Some enterprises have a clear “ideological” position. For instance, we investigated companies committed to extending the benefits of “free software,” and to “architecture for the common good.” While these stances were commercially advantageous, they were not generally adopted for instrumental reasons. Such companies may be motivated to intervene in the public policy environment to promote their principles.

**Recommendations for Policy-Makers**

**Encourage enterprises to see the value of strong networks**

Invest in educational and training programmes and organisations that encourage partnerships with companies and build lifelong learning within companies.

Encourage strong relations between business enterprises and education institutions: these have mutually beneficial knowledge exchange outcomes.

**Involve social partners in the lifelong learning policy process**

Involve professional associations and trade unions in policy development and encourage them to collaborate to develop lifelong learning opportunities for workers and to provide mechanisms for dispute resolution in relation to employees’ training.
While encouraging strong relations between public educational bodies and private companies, regulatory frameworks should ensure the autonomy of educational institutions and strengthen and develop both students’ employability and their roles and rights as citizens.

Policy should ensure public educational institutions are able to deliver a range of economically and socially significant curricula.

**Research Parameters**

**LLLight’in’Europe research project**

The policy trail method involves combining analysis of national legislation and policy initiatives with the results of case study research in and around enterprises. Fourteen case studies were conducted, involving interviews with samples of managers, workers and policy actors, and analysis of company documents. The enterprises were located in Denmark (1), Germany (7), Italy (1), Slovakia (1) and Spain (4). Of the enterprises, five had over 250 employees, five between 50 and 250 employees, and four fewer than 50 (including one with fewer than 10).
Project Identity

LLLight’in’Europe is an FP7 research project supported by the European Union, which has investigated the relevance and impact of lifelong learning and 21st century skills on innovation, productivity and employability. Against the background of increasingly complex tasks and jobs, understanding which skills impact individuals and organizations, and how such skills can be supported, has important policy implications. LLLight’in’Europe pioneered the use of an instrument to test complex problem solving skills of adults in their work environment. This allowed for the first time insights into the development of professional and learning paths of employed individuals and entrepreneurs and the role that problem solving skills play. Additionally, LLLight’in’Europe draws on a series of databases on adult competences from across the world to conduct rich analyses of skills and their impact.

These analyses were conducted in concert with different disciplines. Economists have been analyzing the impact of cognitive skills on wages and growth; sociologists have been investigating how public policies can support the development of such skills and lifelong learning; innovation researchers have been tracking the relationships between problem solving skills, lifelong learning and entrepreneurship at the organizational level; educational scientists have investigated how successful enterprises support their workforce’s competences; cognitive psychologists have researched on the development and implications of cognitive skills relevant for modern occupations and tasks; and an analysis from the perspective of business ethics has clarified the role and scope of employers’ responsibility in fostering skills acquisition in their workforce. The team has carried out its research and analyses on the value of skills and lifelong learning in EU countries, USA, China, Latin America and Africa.

The result is a multi-disciplinary analysis of the process of adult learning and problem solving in its different nuances, and of the levers which can support the development of these skills for both those who are already in jobs, and for those who are (re)entering the labor market, as well as the development of effective HR strategies and public policy schemes to support them.

Supervisory Board

- **Xavier Prats Monné**
  - Director-General, Directorate-General for Education and Culture, European Commission
- **Andreas Schleicher**
  - Director for Education and Skills, and Special Advisor on Education Policy to the Secretary-General at OECD
- **Iain Murray**
  - Senior Policy Officer responsible for Policy on Learning and Skills, Educational Policy, and Regional Government and Devolution, Trades Union Congress (TUC), United Kingdom
- **Oskar Heer**
  - Director Labour Relations, Daimler AG Stuttgart
- **Roger van Hoesel**
  - Chairman of the Supervisory Board at Startlife and Managing Director at Food Valley
This policy brief is part of the publication suite of the FP7 Project LLLight’in’Europe. The publication suite consists of 21 policy briefs, 6 thematic reports and 1 synthesis report. The 21 policy briefs discuss findings and policy implications proceeding from the project’s research; they are organized along three level of analyses (persons; enterprise; country) and seven topics.

01 Resources of society for learning

02 Institutions of learning

03 Circumstances of learning

04 Role of transversal skills

05 Role of job-specific skills

06 Productivity of skills

07 Outcomes of skills

This policy brief discusses findings related to Institutions of learning at the analysis level country. For further publications and multimedia material related to the project, please visit www.lllightineurope.com
